Experience

Semantic Arts

Software Developer Intern | November 2019 – Present

- Led and implemented four major versions of an in-house visualization app called Slow Reveal to present interrelationships between data models to clients, making it easy to explore real-world relationships in data.
- Doubled the size of Slow Reveal's userbase by improving user-experience.
- Designed **OWL** ontologies to model manufacturing systems and demonstrated the ontologies' completeness to clients using Slow Reveal.
- Persisted millions of triples worth of user data into graph databases (**Allegrograph**, **Stardog**) using **SPARQL** queries.
- Validated user data in Slow Reveal and other projects using **SHACL**.

Dark Sky Technology

Software Consultant Intern | May 2021 – December 2021

- Designed **MongoDB** and **SQL** schemas to best represent users, their software, and their software's security.
- Designed an API in **Flask** to query 2 terabytes of tabular and document-based data and return answers to the client, quickly and securely.
- Implemented a **ReactJS** client to bring the product to the user in a satisfying and visually pleasing way.

Skills

- Writing robust automated testing platforms using **Golang**
- Creating front-end applications with **ReactJS**, **Typescript**, and **Vue**.
- Managing front-end state with **Redux**, **VueX**, and **MobX**.
- Creating fast and secure APIs using Javascript's **NodeJS Express**, and Python's **Flask**.
- Interfacing with graph databases using **SPARQL** to query data in **RDF** formats.
- Ensuring code quality with **Pytest** and **Jest**, and data quality with **SHACL**.

Education

University of Toronto

Honors Bachelor of Science | 2020 - Expected 2024

St. George Campus

GPA: 3.93

Completing a dual degree in Computer Science and Mathematics. Completed courses in Software Architecture (CSC207), Digital Logic and Circuits (CSC258), and predicate logic (CSC165, CSC236).
